About

hello@traviscantrell.info
661 373 5219

Product designer with 5+ years across enterprise and operational software, including fintech. I'm drawn to dense, high-stakes workflows (supply chain, field service, financial tools) and to the craft of making them feel obvious in retrospect. Most of my best work has been 0→1: shaping the interaction model, the visual system, and the ship plan when none of those exist yet.

Experience

Oracle

Senior Product Designer

Sep 2025 → Apr 2026

- Lead UX for Oracle's agentic Supply Chain suite, defining how AI-driven recommendations surface inside high-stakes operational decisions — where misplaced trust or ambiguity has real downstream cost.
- Established interaction patterns for human–AI collaboration that have since been adopted across adjacent product areas, shaping the design language for a new class of enterprise tooling at Oracle.
- Partner directly with PMs and engineering leads from problem framing through ship, presenting work to leadership and driving direction on ambiguous, cross-team problems.
- Share work regularly in design reviews and contribute to a strong culture of feedback and iteration across the design team.

Product Designer

Aug 2022 → Sep 2025

- Led 0→1 design of a factory-floor kiosk for production operators in PPE — crafting a high-contrast UI with large touch targets, clear hierarchy, and minimal cognitive load for speed and accuracy on a live production line.
- Designed end-to-end work order and time-tracking flows for field service technicians, replacing fragmented legacy paths with a single coherent workflow.
- Contributed components and patterns back to the SCM design system, raising consistency across the product suite and unblocking other designers shipping in adjacent areas.
- Partnered with UX Research to validate flows with operators and technicians in the field, turning findings into design decisions PMs and engineers could ship.

Payactiv · Product Designer

Jan 2021 → Aug 2022

- Designed financial wellness features for hourly and shift workers — a user base where small UX missteps in money flows directly affect rent, bills, and groceries.
- Owned end-to-end design across mobile and web — research through hand-off — partnering with international engineering teams in a regulated fintech environment.

Education

ArtCenter College of Design

2017–2020

BFA in Graphic Design

Skills

End-to-end ownership · 0→1 product thinking · Complex B2B and technical UI · Multi-step and configuration-heavy workflows · Usability and visual craft · Pattern documentation · Figma component logic · Engineering collaboration on component-to-code translation · Agentic workflow design · Trust and transparency · AI tools in daily design practice (Claude, Pencil.dev, Google Stitch)

Tools

Design & Craft

Figma, FigJam, Claude, Pencil.dev, Cursor, Google Stitch.

Collaboration & Documentation

Jira, GitHub (Familiar), Confluence, Notion, Trello, Miro.
